Pro	Integrated back display panel, easier to clean the whole stove top, food won't drop in the back cavity	Knobs and display panel are front and out of way	Looks more highend because it sits on top of countertop, more home look than apartment	Wall mount unit, but can be installed right underneath the cooktop	
	Easier to replace/upgrade		5 burners	Looks more highend, more home look than apartment	
	Control knobs out of the way		Food debris won't fall into sides	Oven can be replaced without having to replace cooktop	
			Cooktop replacement won't impact oven	Oven can be gas or electric (mostly electric)	
Con	Food may drop on both sides' cavity	Need to build a Stainless Steel back on countertop for heat/splash	Control knobs taking up burner space, most design	Combo with oven will at least double the price	
	Apartment looking	Food debris will drop in both back and sides.	Combo with oven will at least double the price	Oven maintenance would require take up cooktop as well, more intrusive	
	Would have to replace cooktop and oven both when one goes bad	Would have to replace cooktop and oven both when one goes bad	Oven maintenance would require take up cooktop as well, more intrusive
